

Practical 09 – Final Task

Aim

Implement a **Personalized Dashboard** that uses both localStorage and sessionStorage to remember user settings and temporary state.

Scenario

You are creating a “**Personal Dashboard**” that remembers a user’s:

- **Name** (persistent)
- **Theme** (light/dark)
- **Font size** (small/medium/large)
- **Temporary visit count** (session-only)
- **Feedback message draft** (session-only)

However, the following starter code was written by a *developer intern* who made several mistakes and inconsistencies. Your job is to debug and complete the project **without rewriting everything** — only fix where necessary.

Starter Code (with random issues and misleading hints)

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Personal Dashboard</title>
  <style>
    body {
      font-family: Verdana, sans-serif;
      transition: all 0.4s ease;
      text-align: center;
      padding: 20px;
    }
    .dark { background-color: #121212; color: white; }
    .light { background-color: #ffffff; color: black; }
    #controls button, select {
      margin: 6px;
      padding: 8px 14px;
      border: none;
      border-radius: 5px;
```

```

    cursor: pointer;
  }
</style>
</head>
<body>
  <h1 id="welcomeText">Welcome!</h1>

  <div id="controls">
    <input type="text" id="userName" placeholder="Enter your name">
    <button id="saveUser">Save Name</button>
    <button id="themeBtn">Switch Theme</button>
    <select id="fontChooser">
      <option value="small">Small</option>
      <option value="medium">Medium</option>
      <option value="large">Large</option>
    </select>
  </div>

  <p id="tabCounter"></p>

  <h3>Feedback</h3>
  <textarea id="feedback" rows="5" cols="40" placeholder="Your feedback..."></textarea>

  <script>
    // --- Theme Setup (??)
    let themeNow = localStorage.getItem("ThemeMode"); // Wrong key name — later uses
    "theme" not "ThemeMode"; causes mismatch
    if (themeNow == undefined) {
      themeNow = "Dark"; // Default should match class names ("dark" not "Dark").
    }
    document.body.classList.add(themeNow.toLowerCase());
    document.getElementById("themeBtn").onclick = function() {
      // The intern thinks this toggles theme correctly...
      let t = document.body.classList.contains("light") ? "dark" : "light";
      document.body.classList = t; // Wrong: classList is a DOMTokenList, not a string — should
    use remove/add or toggle()
      localStorage.setItem("theme", t); // same key used elsewhere?
    };
  </script>

```

```

// --- Font size (has one wrong reference)
const fSelect = document.getElementById("fontChooser");
fSelect.onchange = function() {
  let f = fSelect.value;
  document.body.style.fontSize = f; // Wrong key capitalization; later uses "fontSizePref"
  localStorage.setItem("fontsizePref", f);
};
let storedFont = localStorage.getItem("fontSizePref"); // note the capital S :)
if (storedFont) {
  document.body.style.fontSize = storedFont; // Will not apply correctly because "medium"
etc. aren't valid CSS sizes
  fSelect.value = storedFont;
}

// --- Username (one line incorrect)
document.getElementById("saveUser").onclick = function() {
  let user = document.getElementById("userName").value;
  localStorage.name = user; // hmm...
  document.getElementById("welcomeText").innerText = "Welcome, " +
localStorage.getItem("username");
// Mismatch: saved as "name" but retrieved as "username"
};
// should also auto-show saved user, but missing logic

// --- Session Counter (needs debugging)
let count = sessionStorage.getItem("visits") ?? 1; // Should convert to number and default to 0;
?? 1 gives incorrect first value
sessionStorage.setItem("visits", count++); // count++ increments *after* setting, so stored
value is always the old one
document.getElementById("tabCounter").innerHTML =
  `This tab has been refreshed ${count} times.`;
// Text displays off-by-one because of above logic

// --- Feedback (autosave works, restore missing)
const fb = document.getElementById("feedback");
fb.addEventListener("keyup", () => {
  sessionStorage.setItem("feedbackText", fb.innerHTML);
// innerHTML is wrong for <textarea>; should use value
});
// Missing logic to load and restore saved feedback on page load

```

```
</script>
</body>
</html>
```

Task 1 – Fix Theme Storage

- There are **two different key names** used for theme in localStorage (ThemeMode and theme).
- Identify which one to keep and make the logic consistent.
- Ensure the theme defaults to *light*, not dark.
- The theme must persist across reloads.

Hint: classList assignment line is wrong — look at `.classList = t;`.

Task 2 – Repair Font Size Logic

- The dropdown saves font size but fails to load properly.
- The bug involves capitalization in the storage key and possibly the unit (“small” ≠ “smallpx”).
- Font size should visually change and persist.

Hint: compare "fontsizePref" vs "fontSizePref" carefully.

Task 3 – Username Greeting

- The intern mixed localStorage.name with localStorage.getItem("username").
- Fix it so it saves and retrieves properly.
- Show the username automatically on reload.

Hint: use one consistent key, not both.

Task 4 – Session Counter

- The logic with count++ and the placement of setItem is wrong.
- Fix it so each reload increases the counter by 1.
- Reset only when the tab is closed.

Hint: increment *after* converting the value to a number.

Task 5 – Feedback Restoration

- The app stores feedback incorrectly (innerHTML instead of value).
- Add the missing “load saved feedback” logic on startup.
- Verify that feedback persists only within the same tab.

Hint: textarea.value not innerHTML.

Final Task

Add a “**Reset Preferences**” button that:

1. Clears all persistent storage (but not session storage).
2. Reloads the page.

What You Should Observe

Feature	Storage Type	Persists After Reload?	Persists After Closing Tab?
Theme	localStorage	Yes	Yes
Font Size	localStorage	Yes	Yes
Username	localStorage	Yes	Yes
Feedback Text	sessionStorage	Yes	No
Reload Counter	sessionStorage	Yes	No

Write Issues, Mistakes, Wrong Hint with justification you have observed and any other issue found/

Loading Info:-

After reloading the tab:-

After RE-OPENING:-
